Smart Med Care — Hospital Management System

Unique Health ID for Seamless Medical Record Sharing

Meena

📅 **Age:** 45 Years

🎓 **Occupation:** Homemaker

📍 **User Type:** Caregiver & Patient

ABOUT

Meena manages the health of her entire family — her children, her husband, and her elderly mother-in-law. She juggles appointments across a government PHC and two different private hospitals, and keeping every family member's paperwork organized is a constant struggle.

🎯 SCENARIO

Meena's child falls ill and needs to see a specialist. The pediatrician asks about the child's vaccination history and past illnesses, but the family's health booklet is misplaced at home. Meena has to reconstruct the details from memory, and the doctor proceeds cautiously without full information.

🏁 GOALS

- Track medical records of all family members in one place
- Avoid losing physical books, papers and prescriptions
- Give doctors an accurate history for every family member during emergencies
- Reduce time spent searching for or recreating past reports

! PAIN POINTS

- Family health records are scattered across multiple books and files
- Physical documents get misplaced or damaged at home
- Hospitals do not share information between each other
- Recalling every member's health history from memory is stressful

🛡 HOW OUR SYSTEM HELPS

- One Health ID per family member stores all records digitally
- Records instantly accessible to any hospital during emergencies
- No dependency on physical books or paper prescriptions
- Reduces stress and delays during urgent family medical needs

❤ PROJECT RELEVANCE

For caregivers like Meena, the Unique Health ID replaces stacks of paper records with one reliable digital record per family member, so no child's or elder's history is ever lost.

Unique Health ID for Seamless Medical Record Sharing

Selvam

📅 **Age:** 50 Years

🎓 **Occupation:** Field Technician / Daily-wage Worker

📍 **User Type:** Mobile Worker / Patient

ABOUT

Selvam works on-site jobs across different locations and often visits the nearest available clinic for minor injuries or seasonal illness rather than a fixed hospital. He has no habit of preserving prescriptions or test reports, so every visit starts from zero.

SCENARIO

Selvam injures his hand at work and visits a nearby government hospital for treatment. A week later the wound worsens, so he goes to a private clinic in another town. The new doctor has no record of the earlier treatment or medication given, delaying proper care.

GOALS

- Get continuity of care no matter which clinic he visits
- Avoid explaining his medical history verbally every time
- Access treatment records even without carrying documents
- Save the cost of repeated consultations and tests

PAIN POINTS

- Frequently changes clinics due to his mobile work
- Never carries or retains paper prescriptions
- Doctors have no way to verify prior treatment
- Risk of wrong or conflicting medication due to missing history

HOW OUR SYSTEM HELPS

- A single Health ID works at any hospital, in any town
- Doctors instantly view prior treatment and medication
- No paperwork needed — the ID alone is enough
- Ensures safer, continuous treatment despite frequent relocation

PROJECT RELEVANCE

For mobile workers like Selvam, the Unique Health ID ensures that changing locations never means starting his medical history from scratch.

Smart Med Care — Hospital Management System

Unique Health ID for Seamless Medical Record Sharing

Krishnan

📅 **Age:** 66 Years

🎓 **Occupation:** Retired Government Employee

📍 **User Type:** Senior Citizen Patient

ABOUT

Krishnan manages chronic health conditions like diabetes and blood pressure. He visits a government hospital for routine check-ups and a private specialist for complications, but keeping track of years of reports has become overwhelming.

SCENARIO

Krishnan visits a specialist for a diabetes-related complication. The doctor needs years of past sugar level records and prescriptions to adjust his treatment, but Krishnan has only brought a few recent reports. Important older records remain at home, misplaced among many old files.

GOALS

- Maintain a complete, chronological medical history without stacks of paper
- Let any doctor view his long-term treatment trends instantly
- Avoid the physical strain of carrying files to every appointment
- Get more accurate treatment based on complete history

PAIN POINTS

- Years of reports are hard to organize and carry
- Age makes it difficult to recall exact past treatments or dates
- Important old records get lost or damaged over time
- Repeating basic tests each visit is tiring and costly

HOW OUR SYSTEM HELPS

- Unique Health ID stores his entire treatment history in one place
- Doctors can view long-term trends for chronic conditions instantly
- No need to carry or organize physical files anymore
- Enables safer, more personalized care for long-term health issues

PROJECT RELEVANCE

For senior citizens like Krishnan, the Unique Health ID turns years of scattered paperwork into one simple, always-accessible medical history.

Unique Health ID for Seamless Medical Record Sharing

Murugan

📅 **Age:** 54 Years

🎓 **Occupation:** Security Guard

📍 **User Type:** Working Staff / Patient

ABOUT

Murugan works long, rotating shifts as a security guard and finds it difficult to take time off for hospital visits. When health issues occur, he visits whichever clinic is open and nearby, often during odd hours, without any past records on hand.

SCENARIO

While on night duty, Murugan suddenly feels chest discomfort and is rushed to the nearest hospital. The emergency doctor needs to know his medical history and any existing conditions immediately, but no one has access to his records, delaying critical early treatment decisions.

GOALS

- Ensure his medical history is available instantly, even in emergencies
- Avoid losing work hours searching for past hospital records
- Get faster treatment during odd-hour or emergency visits
- Maintain a simple record system that fits his irregular schedule

PAIN POINTS

- Irregular shifts leave little time to manage or organize records
- No access to past records during sudden emergencies
- Different hospitals visited at different times have no shared data
- Risk of delayed treatment when history is unknown

HOW OUR SYSTEM HELPS

- Unique Health ID gives emergency doctors instant access to history
- Works any time, at any hospital — critical during odd-hour emergencies
- No manual record-keeping needed despite an irregular schedule
- Speeds up emergency response with immediate medical context

PROJECT RELEVANCE

For shift workers like Murugan, the Unique Health ID can be lifesaving — making critical history available the instant it's needed most.

USER PERSONA

Smart Med Care — Hospital Management System

Unique Health ID for Seamless Medical Record Sharing

Kavitha

📅 **Age:** 38 Years

🎓 **Occupation:** Front Office Receptionist

📍 **User Type:** Healthcare / Administrative Staff

ABOUT

Kavitha manages patient registration at the front desk, handling dozens of walk-ins daily. Much of her time goes into manually verifying identities and collecting missing patient history, which slows down the entire patient flow.

SCENARIO

A patient arrives for a follow-up but cannot recall which department or doctor they consulted earlier, and has not brought previous bills or prescriptions. Kavitha spends several minutes searching through paper registers and calling other departments just to locate the patient's earlier visit.

GOALS

- Verify patient identity and history quickly at the front desk
- Reduce time spent on manual record searches
- Improve patient flow and reduce waiting room congestion
- Access accurate patient data without relying on paper registers

PAIN POINTS

- Manual patient verification takes significant time per visit
- Missing or forgotten patient documents cause delays
- Paper registers are hard to search and prone to errors
- High patient volume makes repeated data entry inefficient

HOW OUR SYSTEM HELPS

- A simple Health ID lookup pulls up complete patient records instantly
- Removes dependency on paper registers and manual searches
- Speeds up registration and reduces patient waiting time
- Improves accuracy of hospital records and reduces daily workload

PROJECT RELEVANCE

For front-desk staff like Kavitha, the Unique Health ID turns a slow manual verification process into a quick, accurate lookup — improving patient experience from the very first step.
